MLC - Table of Contents

Module 3 - Premiums

Section 1: Overview

Section 2: Loss-at-Issue Present Value Random Variable

Example 1: Single Premium / Continuous Insurance

Example 2: Short Term Semi-Continuous Example 3: Fully Discrete Whole Life

Section 3: Important Special Statuses: $\sigma = x$ and $\sigma = x$: \bar{n}

Section 4: Equivalence Principle (Net Premiums)

Part 1: Basic Idea

Part 2: Net Premium Notation for Common Discrete Examples

Part 3: Net Premiums for Special Statuses: $\sigma = x$ and $\sigma = x$: \bar{n}

Part 4: Other Net Premiums

Part 5: With k-pay and mth-ly premiums

Section 5: Incorporating Expenses

Part 1: Expense Types

Part 2: Equivalence Principle (Gross Premiums)

Example: Fully Discrete Whole Life

Section 6: Refunding Premiums

Section 7: Percentile (Probability) Premiums

Example 1: Multiple Policies and the Normal Approximation

Example 2: Single Policy Continuous Type

Example 3: Single Policy Discrete Type
