July 2007

Welcome to the Department of Mathematics at the Florida State University. Our primary missions are graduate education and research, offering both doctoral and masters degrees in an eclectic array of disciplines within mathematics. The nationally and internationally known department faculty have active research programs in various sub-disciplines of pure mathematics (algebra, analysis, geometry, and topology), applied mathematics (applied analysis and PDEs, modeling, and computations), biomedical mathematics (anatomical mapping, computer vision, and biological modeling), and financial mathematics. Graduate students enjoy access to major computing resources both within the department and in related programs. I hope you will take some time to peruse our website for a fuller view of the department's vision and dedication to graduate education. Please contact our Associate Chair for Graduate Studies, Professor Case, for more information.

If you have specific questions as you explore our website, you may want to write professors whose work is of interest to you; about beginning study in any of the four major areas of concentration, you may contact the Directors of each - Professors Aluffi, Kopriva, Quine, Kercheval.

Some prospective students visit the campus to speak with our faculty and graduate students as they are making their decisions; I shall look forward to meeting you.

Philip L. Bowers
