MAP 4170Name:Test 1Date: February 4, 2014

Show sufficient work and clearly mark your answers. Each problem is worth 10 points.

- 1. On January 1, 2012, Kevin deposits 15,000 into an account that credits interest using an interest rate of *i*, compounded monthly (i > 0). On January 1, 2013, Kevin deposits another 25,000 into the account. On January 1, 2014, the two deposits have accumulated to a total of 45,670. Determine *i*.
 - (A) 8.14%
 - (B) 8.75%
 - (C) 9.13%
 - (D) 9.42%
 - (E) 9.60%
- John deposits 1000 into an account. After 4n years the value of the deposit is 16,000. David deposits X into another account. After 3n years the value of David's deposit is 24,000. Both accounts earn the same nominal discount rate, compounded monthly. Determine X.
 - (A) 2950
 - (B) 3000
 - (C) 3050
 - (D) 3100
 - (E) 3150

3. Determine which of the following equations represents the correct relationship between a nominal discount rate compounded semiannually and its equivalent nominal interest rate compounded quarterly.

(A)
$$d^{(2)} = -2\left[\frac{1}{\sqrt{\left(1+\frac{i^{(4)}}{4}\right)}} - 1\right]$$

(B) $d^{(2)} = -2\left[\frac{1}{\sqrt[4]{\left(1+\frac{i^{(4)}}{4}\right)}} - 1\right]$

(C)
$$d^{(2)} = -2\left[\frac{1}{\left(1+\frac{i^{(4)}}{4}\right)^2} - 1\right]$$

(D)
$$d^{(2)} = -2\left[\frac{1}{\left(1+\frac{i^{(4)}}{4}\right)^4} - 1\right]$$

- (E) None of the above
- 4. Determine $\frac{d}{dv}(d)$, where d is the periodic effective discount rate that corresponds to the periodic discount factor, v.
 - (A) *v*
 - (B) −*v*
 - (C) 1
 - (D) -1
 - (E) None of the above

- 5. An initial deposit of *X* is made into an account that credits interest using a simple interest rate of 5% for the first three years and a constant force of interest equal to 4% thereafter. The accumulated value of the initial deposit after seven years is 11,735. Determine the accumulated value of the initial deposit after two years.
 - (A) 9565
 - (B) 9575
 - (C) 9585
 - (D) 9595
 - (E) 9605

- 6. Account A credits interest using a simple discount rate, *d*. Account B credits interest using a nominal discount rate of 8%, compounded quarterly. The forces of interest in the two accounts are equal after 1 year. If 1000 is deposited into Account A at time 0, determine the accumulated value of the deposit after 4 years.
 - (A) 1400
 - (B) 1425
 - (C) 1450
 - (D) 1475
 - (E) 1500

- 7. An account credits interest using $\delta_t = 0.15\sqrt{t}$ for t > 0. Determine $\frac{i_2}{d_3}$
 - (A) 0.85
 - (B) 0.90
 - (C) 0.95
 - (D) 1.00
 - (E) 1.05

- 8. An account credits interest using $\delta_t = \frac{t}{4+2t^2}$ where *t* is the number of years after January 1, 2013. Determine the value on July 1, 2016, of a deposit of 1000 made on January 1, 2014.
 - (A) 1375
 - (B) 1400
 - (C) 1425
 - (D) 1450
 - (E) 1475

- 9. Chris owes Chuck two payments: a payment of 2000 on January 1, 2016 and another payment of 3000 on October 1, 2017. Chris agrees to make a single payment on January 1, 2015, in exchange for making the two later payments. Determine the amount of the single payment assuming a quarterly effective discount rate of 2%.
 - (A) 4250
 - (B) 4260
 - (C) 4270
 - (D) 4280
 - (E) 4290

- 10. An account credits interest using a simple interest rate of *i*. An initial deposit grows to 11,500 after 3 years. The value of the initial deposit after 8 years is 14,000. Determine *i*.
 - (A) 3.5%
 - (B) 4.0%
 - (C) 4.5%
 - (D) 5.0%
 - (E) 5.5%
