Show sufficient work and clearly mark your		r answers. Each problem is worth 10 points.		
1.	month starting, starting today, with the l birthday. She assumes that she will earn and she assume inflation over this time p	has to deposit 500 at the beginning of each last deposit being one month before her 65 th in 9% compounded monthly on her deposits, period to be 3% compounded monthly. Van's 65 th birthday of this annuity using the		
	(A) less than 1.26 million			
	(B) equal to or more than 1.26 million,	but less than 1.27 million		
	(C) equal to or more than 1.27 million,	but less than 1.28 million		
	(D) equal to or more than 1.28 million,	but less than 1.29 million		
	(E) equal to or more than 1.29 million			
2.	Using an annual effective interest rate of 20-year 5% annual coupon bond.	f 5%, determine the Modified duration of a		
	(A) 12.12			
	(B) 12.33			
	(C) 12.46			
	(D) 12.95			

(E) 13.09

5.	A 3-year 1000 face value bond, redeemable at 1200, has 5% annual coupons. The annual effective yield rate consistent with the current term structure of interest rates is 3.13%. Given that the 1-year spot rate is 6% and the 3-year spot rate is 3%, determine the price of a 1000 face value 2-year zero-coupon bond. Assume the zero-coupon bond is redeemable at par.				
	(A) 880				
	(B) 900				
	(C) 920				
	(D) 940				
	(E) 960				
6.	You are given:				
	(i) The annual effective yield on 1-year zero-coupon bonds is 3.5%.(ii) The annual effective yield on 2-year zero-coupon bonds is 3.5%.				
	If a 3-year 1000 par value bond, redeemable at par, with 3% annual coupons is selling at a discount of 25, then determine the annual effective forward rate for year 3.				
	(A) 3.9%				
	(B) 4.1%				
	(C) 4.3%				
	(D) 4.5%				
	(E) 4.7%				

7.	Determine the Macaulay convexity of a 3-year 4% annual coupon bond, redeemable at par, using a 5% annual effective interest rate.				
	(A) 8.2				
	(B) 8.3				
	(C) 8.4				
	(D) 8.5				
	(E) 8.6				
8.	A portfolio consists of the following three bonds:				
	Bond I is a 5-year zero-coupon bond, redeemable at <i>C</i> .				
	Bond II is a 30-year annual coupon bond. The first coupon is X and each subsequent coupon is 5% more than its previous one. The redemption value is Y . Using an annual effective interest rate of 3%, the price is 1000 and the Macaulay duration is 23.				
	Bond III is a 10-year zero-coupon bond, redeemable at D . It is priced at 1000 to yield 3% annual effective.				
	The modified duration of the portfolio is 15 when using a 3% annual effective interest rate. Determine \mathcal{C}				
	(A) 233				
	(B) 297				
	(C) 348				
	(D) 402				
	(E) 470				

- 9. The present value of a sequence of cash flows is 1403 when calculated using an annual effective interest rate of 4.5%, but is 1395.25 when calculated using an annual effective interest rate of *i*. Using an annual effective interest rate of 4.5%, the modified duration of the payments is 7 and the modified convexity of the payments is 64. Determine *i*.
 - (A) 4.52%
 - (B) 4.54%
 - (C) 4.56%
 - (D) 4.58%
 - (E) 4.60%

10. You are given the following table of interest rates:

Calendar Year of Investment	Investment Year Rates			Portfolio Rates
Y	i_1^Y	i_2^Y	i_3^Y	i^{Y+3}
2008	0.07	0.06	0.05	0.04
2009	0.06	0.06	0.06	0.06
2010	0.10	0.08	0.08	0.04

1000 is invested at the beginning of each of years 2008, 2009, and 2010. Determine the amount of interest paid for year 2013.

- (A) Less than or equal to 140
- (B) Greater than 140 but less than or equal to 150
- (C) Greater than 150 but less than or equal to 160
- (D) Greater than 160 but less than or equal to 170
- (E) Greater than 170
