L-TAM: Table of Contents
Steve Paris (FSU)

Module 1 – Survival Analysis

Section 7: General Statuses and Failure Time (with Multiple Lives)
    Part 1: Basic Idea
    Part 2: Joint Life(JL) and Last Survivor (LS) Statuses
    Part 3: Relating Failure Time RVs
    Part 4: Joint Life Special Case (n-year temporary Failure Time)
    Part 5: n-year temporary expectations
    Part 6: Recursion for n-year temporary expectations

Section 8: Independent Lives and Non-Independent Lives
    Part 1: Factoring Probabilities with Independent Lives
    Part 2: Contingent Probabilities with First to Die
    Part 3: Contingent Probabilities with Second to Die
    Part 4: Common Shock

Section 9: Traditional Multiple Decrement Models
    Part 1: Introduction to Multiple Decrements
    Part 2: Multiple Decrement Probabilities
    Part 3: Introduction to Associated Single Decrements
    Part 4: Associated Single Decrement (Primed) Probabilities
    Part 5a: Relating Unprimed and Primed Probabilities (MUDD and CF)
    Part 5b: Deriving the CF (MUDD) Formula
    Part 6: Relating Unprimed and Primed Probabilities (SUDD)

Section 10: Multi-State Models
    Part 1: Introduction to Multi-States (Forces of Transition)
    Part 2: Multi-State Probabilities
    Part 3a: The Permanent Disability Model (Elementary Probabilities)
    Part 3b: The Permanent Disability Model (Advanced Probabilities)
    Part 4: The Disability Model
    Part 5: Kolmogorov's Differential Equations
    Part 6: Euler's Method for Approximating Solutions to Initial Value
        Problems
    Part 7: Kolmogorov's Forward Equations
